

PLACE Form B

The following form reflects the content of the tablet-based PLACE Form B (Spot Verification) questionnaire for the Cross-Border Integrated Health Study.

While this paper-based questionnaire is provided for reference, the tablet-based form should be used consistently throughout the study. Extra, fully charged tablets should be carried during all stages of tablet-based data collection in case of tablet malfunction.

When referencing this paper-based form, note:

1. The tablet-based forms are adaptive. Skips are automated and question text is customized to suit prior responses. To represent such adaptations, multiple versions of several questions are shown. Version numbers are indicated by ‘_v’ and a version number following the question code (e.g., b10a_v1, b10a_v2).
2. Additional data validation prompts are programmed into the tablet-based forms. These include range checks, restrictions on response formats/lengths, question completion requirements, and additional hints, interviewer instructions, and ‘don’t know’/refusal code prompts.
3. GPS coordinates are collected within the tablet-based forms using the tablet’s location services. Additional equipment is not required.
4. Question codes are not in numerical order. Proceed through the survey in the order in which the questions appear, following skip logic as directed.
